

Transportation Technology AAS

Maritime – Concentration

Career & Technical Division

Program Description:

The Transportation Technology Program provides a specialized distance learning education and training for the student or current industry employee having an interest in the transportation field. This unique on-line, distance learning and life-experience curriculum breaks the tether to the traditional classroom. It is designed to support a drop-in/drop-out lifelong learning philosophy of continuing education and ladder degree options from a certificate of achievement for specific skill sets to an Associate's, Bachelor's and Master's degree in transportation studies. In addition to formal academic credit, the program is designed to accept related credit equivalency from any academic, vocational, or industry training program to include documented life-long learning skills, test-out exams, industry recognized certifications, and/or continuing education units (CEU's).

The Maritime Technology option provides training and/or college equivalent credit for becoming a deckhand, tankerman, captain, or engineer who works on a vessel. These employees operate and maintain civilian-owned merchant ships, tugboats, towboats, ferries, barges, offshore supply vessels, cruise ships and other waterborne crafts. Some merchant mariners spend extended periods on the river or at sea while others operate close to port and can go home at night.
